The Institution of Electrical Engineers

Physics Abstracts is published every two weeks by the Institution of Electrical Engineers in association with the American Institute of Physics. Twice-yearly subject and author indexes covering the period January–June and July–December are included in the subscription. Printed by Unwin Brothers Limited, Woking and London, England. Second class postage paid in New York, NY 10001, USA.

Six-monthly indexes

Cumulative indexes to Science Abstracts are published twice a year covering the period January-June and July-December. They comprise Author and Subject indexes and some specialised or 'small' indexes.

Author indexes

This lists in alphabetical order all authors of papers abstracted in the abstracts journal during the six months covered by the index together with the title of the paper. Where there are co-authors of a paper the title of the paper is given only under the name of the first author. The serial number of the paper in the abstracts journal is in the form 2-12345, ie 1972—abstract no. 12345.

'Small' indexes

These are specialised indexes which allow the user to find quickly particular types of information which might be difficult to find using the subject or author indexes.

Bibliography index

In this index reference is made to articles which contain a significant list of references or bibliography on the subjects listed.

Book index

This gives details of books received and abstracted by the abstracts journal.

Patent and Report indexes

These give details of those reports or patents which have been abstracted in the abstracts journal during the past six months.

Conference index

This index lists conferences for which published proceedings have been received and abstracted. Reference is given to the individual papers and their serial numbers in the abstracts journal.

Subject index

The subject index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it.

2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.

3. If you do not find the subject heading you first choose, try a more general heading.

4. If you have difficulty at any stage in determining the appropriate heading, consult the Classified List of Headings on the yellow pages at the end of the index. This gives for each broad subject area the headings used in the subject index. Choose the most appropriate and look them up in the index.

5. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last digit of the current year, eg 2—12345: ie Abstract number 12345 in the abstracts journal for 1972.

  - lenses, design obs. 2—21142
  - lenses, thin, with variable astigmatic power 2—34453
  - lenses for spatial filtering, correction 2—34451
  - magnetic quadrupole lens, third order aberration coefficients, comparison of expressions 2—34320
  - mass spectrometers, influence of fringing fields 2—567
  - microprobe devices, cross section of deflected beams, current-density redistribution 2—23534
  - microscope objective, effect on images in quantitative microscopy 2—5406
  - mirrors, paraboloid, correction by pairs of spherical mirrors 2—7579
  - multipass optical cell, 3rd order aberrations 2—31110
  - optical 2—23215
  - optical design of lenses, astigmatism 2—27015
  - optical systems, use of aspherical surfaces, aberration theory and size/weight considerations 2—34517
  - phase, of acoustic lens, sound field in focal region 2—5219
  - pupil-scan aberration analyser and spot diagram measurement system 2—27574
  - quadrupole lenses, nonsymmetric, correction to third order 2—23522
  - quadrupole-octopole electron lens corrector system, third order geometric and first order chromatic coeffs. 2—17557
  - scan and measure devices, systematic errors in optics 2—34516
  - spectrographs with correction of Schmidt camera effected in the collimator 2—297
- **Aberrations, optical** continued
  - spherical, correction using aspherical surface rep. by polynomial approx. 2—5402
  - spherical, det. from contrast alterations in defocused image of radial grating under coherent illumination 2—23683
  - spherical, electron optical correcting system 2—14388
  - spherical, or electron microscope magnetic lens, correction by transparent foils 2—5333
  - spherically aberrated annular aperture, far field diffraction of partially coherent light 2—27597
  - spherically aberrated circular aperture diffraction of partially coherent light, calc. of irradiance distribution 2—23693
  - superachromatic glass triples and colour correction, tables 2—23682
  - theory, matrix treatment 2—34446
  - vacuum u.v. monochromator design criteria 2—14467
  - wave form, tolerance conditions 2—34441
- **Abrasion**
  - *see also Hardness; Wear*
  - composite, brittle matrix, water content effects 2—1306
  - glass, soda borosilicate, water content effects 2—1306
  - lunar soil, friction and abrasion props. 2—33726
  - sliding electrical contacts, wear testing under current 2—29365
  - steel, surface hardening by u.s. treatment in hydroabrasive medium 2—36196
  - wear, and adhesive wear quantitative study 2—29338
  - Fe-Cr base alloy, austenitic, abrasive wear resist. 2—36177
  - InSb, abrasion-induced surface damage 2—12649
  - Si lattice defects, surface layers, lapping 2—36270
- **Absorption**
  - *see also Alpha-particles; Beta-rays; Cosmic rays; Electrons; Gamma-rays; Hyperons; Mesons; Neutrons and antineutrons; Protons and antiprotons; and also Sorption; X-ray absorption*
  - atomic, using photon counting, use and limitations 2—8431
  - atomic absorption spectroscopy, significance of thermally assisted processes 2—2462
  - capillary-gravity waves in shallow water 2—3348
  - graphite, kinetic theory of surface and thermal diffusion in adsorbed Ar isotopic mixtures 2—39549
  - i.r., HF absorption cell, construction, gas handling apparatus 2—37934
  - i.r. in rhodochrosite, effects on complex refractive index 2—7040
  - living tissue, of radiation, Nimrod beam expts., quaterly report 2—20744
  - Lorentz absorption lines, new analysis procedures 2—8030
  - precipitation, effective attenuation, in submillimeter range 2—16832
  - radiation, bulk materials from which low-loss glass fibres are drawn 2—34531
  - seismic waves, P signals 2—7209
  - seismic waves in earth rel. to geophysical prospecting, patent 2—20300
  - solar radiation, by atmos., det. of total water vapour content 2—16813
  - steel, of hydrogen, tensiometric investigation 2—3948
  - thermal radiation props. of solids 2—19474
  - X-ray in crystals, temp. depend., quantum theory 2—19019
  - X-rays by interstellar matter 2—20606
  - CO_2 laser beam, atmospheric absorption at 10.6 μm 2—33470
  - Cu thin film, effects of absorbed argon, on electrical properties 2—1485
  - **acoustic waves**
    - *see also Noise abatement; Transmission/acoustic waves*
    - active absorbers, sonic tube terminated by iterative impedance 2—34110
    - alcohols, volume viscosities study 2—12553
    - alkali metal binary mixtures, liq., mol. assoc. 2—28851
    - antiferromagnet, critical phonon attenuation exponent 2—9872
    - atmosphere, temp. and humidity profile calc. from attenuation 2—7259
    - attenuation, obs. of changes with ultrasonic continuous wave spectrometer 2—23378
    - attenuation in lined rectangular ducts with flow, and aircraft engine noise reduction 2—8007
    - attenuation spectra in acoustically treated rectangular duct 2—7750
    - audiences on unupholstered seats, model auditor simulation 2—2244
    - car exhaust mufflers, effect of flow rate of gas on efficiency 2—20926
    - in caves, mines and tunnels, attenuation coeffs. and effects of temp. inversions 2—27254
    - dielectric with high dislocation density, thermal phonon scatt. 2—6662
    - ducts with sound absorbing Kapron fiber linings, frequency characteristics 2—27288
    - expansion chamber filter, attenuation props., influence of air flow 2—23357
    - ferromagnet, critical phonon attenuation exponent 2—9872
    - ferromagnetic insulator, attenuation and freq. shift 2—36338
    - ferromagnetic insulator, coupled photon-magnon-phonon modes 2—10185
    - fibrous absorbents, sound propagation analysis 2—5229
    - due to fish in shallow water 2—1805
    - gas, polyatomic 2—35684
    - Helmholtz resonator with $C_2Cl_2F_4$ gas in cavity 2—34120
    - impedance of sound absorbing systems at oblique sound incidence 2—5230
    - integrated pulse technique for meas. of absorpt. techniques 2—34143
    - Kramers-Kronig formulae applic. to dispersion relations 2—32823
    - lined ducts with mean flow, attenuation optimization 2—27255
    - liners, turbulence near 2—20925
    - liquid, rel. to suitability for acoustooptic device appl. 2—25086

Cu, thermal damping of dislocations attenuation obs. 2—25405
D_2O, effect of alkali halides on absorption in 30-100 MHz range studied by pulse technique 2—35758
EuTe, rel. to mag. ordering 2—25673
Ga, acoustic cyclotron resonance obs., effective masses determ. 2—16127
Ga, intermediate state superconductor 2—13158
Ga, supercond. gap determ. from attenuation meas. 2—4174
GaAs, photoconductive, illumination depend. 2—19413
$GdAlO_3$, u.s.-spin wave interaction 2—32837
Ge:Sb, 1GHz long. wave, temp. depend., donor electronic relaxation 2—9877
Ge, dislocation effects on u.s. attenuation 2—40062
Ge, hypersonic attenuation due to optically excited carriers 2—9875
Ge, hypersonic attenuation via exciton-phonon interaction 2—9876
Ge, phonon scatt. mechanism, low temp. 2—29532
H_2O-D_2O binary mixtures, 10-50°C, exptl. excess absorption compared with calc. structural absorption 2—35759
H_2O, effect of alkali halides on absorption in 30-100 MHz range studied by pulse technique 2—35758
He, liquid, attenuation meas. for pressures from 0-24.7 atm., comparison with theory 2—39407
Ho, anomalous shear attenuation between T_n and T_c 2—32834
Ho, critical effects near Neel pt. 2—29838
Ho, critical phenomena, spin diffusion coeff. 2—29530
InSb, attenuation, electron-phonon interaction 2—32838
n-InSb, attenuation in magnetothermally pinched plasma 2—36340
KD_2PO_4, Landau-Khalatnikov damping of transverse elastic waves 2—29533
KH_2PO_4, KD_2PO_4, dielec. susceptibility and polarization obs. 2—4279
LiF, attenuation, obs. of deformation defects, annealing effects, 78-350K 2—12859
LiF, deformed, dislocation loop density and length meas. 2—36033
$LiNbO_3$, piezoelec. leaky surface wave 2—29526
$Mn_{0.82}Fe_{2.18}O_4$, acoustic losses due to disaccommodation mag. relax. effects 2—29538
MnTe, longit. wave attenuation around Neel temp. 2—1426
Mo-Re alloys, supercond., attenuation energy gap anisotropy 2—16180
Mo, supercond., hypersound attenuation 2—16181
Mo crystal, dislocational internal friction 2—6497
NH_3, rel. to vibrational and rotational relaxation data 2—31811
NH_4Br, disordered cubic phase, Brillouin scatt. obs. 2—26201
NaCl, attenuation, dislocations influence 2—29534

Absorption continued
acoustic waves, ultrasonic continued
NaCl, resonant freq. and decrement 2—3780
Nb, dislocation damping by phonon viscosity 2—29183
Nb, supercond., rel. to dislocation dynamics 2—36465
O_2 and O_2-H_2O gas mixtures, attenuation temp. depend. 2—28740
Pb, thermal damping of dislocations, attenuation obs. 2—25405
Pb film, attenuation, surface sheath effect 2—29638
Pb film, superconductor, Ginzburg-Landau parameter determ. 2—19596
RbH_2PO_4, near ferroelec. phase transition temp., critical effects 2—36341
Sb, magnetoacoustic resonance rel. to Fermi surface 2—32877
SbSI, ferroelec. crysts., damping near phase transition, freq. depend., temp. depend. 2—29535
p-Si, attenuation quenching by mag. field 2—40063
Si, phonon scatt. mechanism, low temp. 2—29532
p-Si, phonon transmission, impurity effects 2—32832
Sn, giant quantum oscillations of attenuation 2—6667
Sn, intermediate state, reson. peak obs. 2—36468
Sn, intermediate state attenuation 2—36470
$SrTiO_3$, anisotropy at phase transition 2—16022
$SrTiO_3$, displacive transition obs. 2—32780
$SrTiO_3$, phase transitions, critical dynamics for $T \geqslant T_c$ 2—25932
$SrTiO_3$, sound vel., temp. depend., 105 K transition, phonon modes 2—9879
W, Doppler-shifted acoustic cyclotron resonance obs. of Fermi surface 2—22478
Xe, along critical isochore 2—31893
α-ZnS, coeffs. meas. by u.s. pulse method 2—25482
Zr-Nb alloy, $\beta \rightarrow \omega$ transform., attenuation obs. 2—40014
